This is a line.

This has 1 enter hits.

This has 2 enter hits.

This little tutorial shows how to change the default behaviour after pressing enter in two popular editors, CKEditor and TinyMCE. We make a module to override certain settings in both editors.

Option 1.

Get **this** and extract it in your **sites/all/modules** folder, **enable** the module and you are done.

Option 2.

OR do it step by step:

- Create **overrides** folder in **sites/all/modules**

- Inside it create two files:

overrides.info and **overrides.module**

in **overrides.info** write this:

name = Overrides
description = Overrides settings
core = 7.x

package = own

in **overrides.module** write this:

```
/* wysiwyg overrides */

function overrides_wysiwyg_editor_settings_alter(&$settings, $context) {
  if($context['profile']->editor == 'ckeditor') {
    $settings['enterMode'] = 2;
    $settings['shiftEnterMode'] = 1;
  } else if($context['profile']->editor == 'tinymce') {
    $settings['forced_root_block'] = FALSE;
    $settings['force_br_newlines'] = TRUE;
    $settings['force_p_newlines'] = FALSE;
  }
}
```

- **Remember** to add <?php on top of the **overrides.module** and **don't** add ending ?> tag

- Go to **modules** and you should see this:

▼OWN

ENABLED	NAME	V
<input checked="" type="checkbox"/>	Overrides	

enter in CKEditor and
TinyMCE.

- **Enable** the module and you are done.

It should work immediately, but if it doesn't, **flush all caches**.

Comments

Also good for Drupal 6

This seems to be just as good for Drupal 6.

[REPLY](#)

thank you!

Thank you very much, this helped me a lot! I was searching for solution whole day, and finally found your site. Great job!
